considerate for the expension of the second second

Listing of Claims:

Claim 1.(currently amended): A method of stably expressing a selected DNA sequence in the central nervous system of a mammal comprising administering to the mammal a neurotropic viral vector which infects cells of the central nervous system of the mammal, said vector containing a selected DNA sequence operatively linked to a selected promoter so that said selected DNA sequence is stably expressed for at least four months by infected central nervous system cells.

Claim 2 (original): The method of claim 1 wherein the selected promoter is the LAT promoter.

Claim 3 (original): The method of claim 1 wherein the selected DNA sequence encodes β -glucuronidase.

Claim 4 (original): The method of claim 1 wherein the selected DNA sequence encodes tyrosine hydroxylase.

Claim 5 (original): The method of claim 1 wherein the viral vector comprises an HSV vector.

Claim 6 (original): The method of claim 5 wherein the HSV vector comprises an HSV-1 strain.

Claim 7 (original): The method of claim 6 wherein the HSV-1 strain comprises strain 17.

Claim 8 (previously amended): A method of stably expressing 3-glucuronidase in the brain of a mammal comprising administering to the mammal a neurotrophic viral vector which infects cells of the brain of the mammal, said vector being an HSV-1 vector containing a DNA sequence encoding \$-glucuronidase operatively linked to a LAT promoter, so that the infected brain cells stably express 3-glucuronidase.

Company and the control and the department of the control of the c

Claim 9 (original): The method of claim 8 wherein the HSV-1 vector comprises HSV-1 strain 17.
